

Confirmation: approval conditions are met

The National Council on Bioethics considering existing legislation of Georgia concerning protection of research subjects reviewed the following research protocol:

Project Title: „Development of Integrated International Multi-center Internet-based Electronic Database of Epilepsy (EpiNet)“

Principal Investigator: Sophio Kasradze, Doc Med. Sciences, Director of the Institute of Neurology and Neuropsychology

The National Council on Bioethics considered the abovementioned research project on its 82nd (1st in 2013) meeting on 13th of February 2013 and approved the research project with conditions, which are described in the conclusion of the Council of February 13.

The researchers considered comments (conditions) of the Council and the Principal Investigator submitted amended documentation.

I confirm that all the conditions of the Council have been met. So, the research project is approved by the Council and investigators can carry out the research within the amended research protocol.

Givi Javashvili, MD, PhD
